

# Avalon Plus LE

## Diploid Perennial Ryegrass

Avalon Plus LE was bred in Australia as a replacement for Avalon. Avalon Plus LE was crossed and bred to be more productive and later heading. Avalon Plus LE suits dryland medium to high rainfall regions and irrigation in Dairy, Beef and sheep systems as a durable quality perennial with robust maturity.

### Key Features

- Improved density when compared to Avalon
- Bred for persistence under grazing
- Improved late season quality
- Reduced risk of ryegrass staggers

### Region

Medium to high rainfall areas and is suitable for irrigation

### Plant Characteristics

Avalon Plus LE is a densely tillered plant with semi-erect growth and a fine leaf with a dense growth habit.

### Maturity

Mid-late maturity, approximately 7 days later than Avalon and 14 days later than Victorian

### Key Uses

Avalon Plus LE provides quality late season feed where conditions allow and has improved upon Avalon's Winter feed with improved vigour.

### Grazing

Robust persistent in medium to high rainfall dairy, beef, & sheep systems.

### Disease and Resistances

Bred in a high rust pressure environment for improved resistance when evaluated against comparators.

### Animal Health

Avalon Plus LE is a low endophyte perennial ryegrass, therefore, the risk of ryegrass staggers is greatly reduced.

## Mixes

Avalon Plus LE is a strong grass as a sole variety in a pasture while also shining in mixes. Consider combining Avalon Plus LE with annual clovers to fix nitrogen and further improve feed quality.

Avalon Plus LE features in three of AGF Seeds specialty mixes, TARGET Valley 650+ for high rainfall environments looking to achieve year-round feed, TARGET Ryegrass S&B for persistent and productive pastures in medium rainfall environments, and TARGET Udder Bliss for a high performing ryegrass and white clover mix for high rainfall zones.

### TARGET Valley 650+
