

Forester oats

Forester Oats are the benchmark for late maturity hay oats. Forester allows for early sowing due to its early vigour which gives farmers grazing opportunities. If conditions allow Forester Oats can provide multiple hay/silage cuts.

Key Features

- Excellent foliar disease resistance profile
- Export hay quality
- Excellent early vigour, lodging and shattering resistance.

Region

Suitable in Southern and Northern Australia

Maturity

Very Slow

Plant Type

Moderate-Tall variety providing bulk hay. Quick regrowth.

Hay and Grazing

Forester's early vigour allows for early sowing which can open up early grazing opportunities for farmers. With strong regrowth growers will still receive a high level of bulk for hay or silage, and there may be the chance for multiple cuts where conditions allow.

Forester provides incredible hay quality with trials and in field results showing high crude protein, metabolisable energy (ME), and water-soluble carbohydrates.

Forester can be combined with other cultivars like peas or vetch to create premium grazing, hay, and silage.

Disease Resistance

Excellent foliar disease resistance profile
