

RedGum 2 Tetraploid Annual Ryegrass

Rapid establishment, early maturity and improved grazing and hay production are the main benefits of this low cost annual tetraploid. Quality Assurance practices during seed production ensures consistent quality is guaranteed in this variety.

Key Features

- Early Maturity
- Quality Assured Seed
- Double Cropping Opportunities
- Improved Grazing & Hay Production over VNS annuals

Maturity

Early Season

Region

A short growing season annual tetraploid for use in short season environments and situations like double-cropping where the annual ryegrass is terminated early.

Seed Quality

Don't risk your pasture by sowing a VNS Annuals where quality can not be ensured. AGF Seeds has been producing ryegrass for over 15 years and maintains the highest standards through seed production, seed cleaning, and continuous quality assurance and testing. You can plant AGF Seeds ryegrass with confidence.

Great Value in the Right Situation

Looking for a short season or more economical grass does not mean growers need to compromise on quality and reliability. In shorter season environments RedGum 2 can provide great return on investment, while growers in longer season areas need to balance the upside in biomass and quality of high performing annuals like Prodigy Annual Italian.

See below an example in our Smeaton trial site where different ryegrasses are mown in the foreground showing the late season regrowth potential and let run, as you might in a hay paddock, in the background. RedGum 2 late in the season is wanting to go reproductive and could have a final cut before making way for a summer crop. In comparison, if the season allows, the later annuals still have a green stem and if cut would likely return extra vegetative growth.
